EDUCATION

Bennett University

Bachelor of Technology (BTech) in Computer Science

Greater Noida, Uttar Pradesh

Jan 2023 – Jan 2027 (Expected)

- **Relevant Coursework:** Cloud Computing, Networking, Data Structures, Artificial Intelligence

TECHNICAL SKILLS

Cloud Platforms & Tools: AWS, Microsoft Azure, Linux (Ubuntu), Systemd, Bash, Cron, Vercel

Languages: Python, JavaScript, Bash scripting

Frameworks & Libraries: React, Vite, Framer Motion, Firebase, Gradio, Scikit-learn, TensorFlow, ChromaDB

Cloud Concepts & Services: Serverless Architecture, IaaS, EC2, Lambda, S3, IAM, DynamoDB, API Gateway, OAuth

PROJECTS

Aether: AI-Powered Music Matchmaking Platform | *React, Firebase, Vite, Vercel*

Jun 2026

- Engineered a full-stack, real-time social application that synthesizes user Spotify data into 15-dimensional “Taste Vectors” to facilitate high-affinity musical matchmaking.
- Developed a real-time messaging architecture using Firebase Firestore’s `onSnapshot` listeners, enabling instantaneous peer-to-peer chat with optimized state synchronization.
- Designed a mobile-first “Radical Simplicity” UI leveraging Framer Motion for hardware-accelerated animations and interactive swipe gestures, delivering a native-app feel on the web.
- Implemented production-ready CI/CD pipelines via Vercel with secure environment variable management for OAuth-based authentication and seamless SPA deployment.

Zenith Medical AI | *Python, Gradio, ChromaDB, Llama 3 (Groq API), AWS EC2*

Apr 2026

- Architected a privacy-centric RAG pipeline to query ~25,000 clinical records, eliminating LLM hallucinations in a clinical decision-support context.
- Engineered a persistent local vector database using ChromaDB (2.33 GB) and offloaded inference to Llama 3 (8B) via the Groq API to bypass AWS Free Tier memory constraints.
- Deployed on AWS EC2 with a systemd daemon for high availability and a custom Bash/Cron DDNS setup for automated IP routing via DuckDNS, eliminating reliance on Elastic IPs.

Fake News Detector | *Python, Scikit-learn, TensorFlow, Microsoft Azure*

Oct 2025

- Built NLP-based classifiers trained on public fake news datasets to detect and flag misinformation articles using Scikit-learn and TensorFlow.
- Deployed the trained classification model as a scalable web service on Microsoft Azure.

Lost and Launder | *AWS Lambda, API Gateway, DynamoDB*

Oct 2024

- Designed and implemented a serverless backend using AWS Lambda and API Gateway for an institutional lost-and-found and laundry management mobile application.
- Utilized DynamoDB (NoSQL) for highly scalable, low-latency storage of lost item reports and laundry service statuses.

EXPERIENCE

Junior Core Member (Content Writer)

Nov 2023 – Mar 2024

SPARK, E-Cell

Uttar Pradesh

- Crafted the opening and closing ceremony speeches for “Bennovate,” a university-wide innovation showcase.

CERTIFICATIONS & LANGUAGES

Certifications: Getting into the Serverless Mindset – AWS (Sep 2024), AWS Compute Services Overview – AWS (Jul 2023)

Languages: English (Fluent), Hindi (Native), Japanese (Basic)
